Georgia is rapidly emerging as a hub for renewable energy innovation, with photovoltaic (PV) energy storage projects leading the charge. This article explores the latest developments, key players, and

See how solar and storage is growing in Georgia with the latest data on capacity, installations, and trends shaping the state's future.

The medium-term assessment for wind and solar power potential is based mostly on network and balancing considerations. 7 Georgia's electricity transmission

Georgia Power continues to work with the Georgia PSC to integrate BESS technology across the state. BESS projects support the overall reliability

The Georgia Public Service Commission last week approved five new power purchase agreements (PPAs) for Georgia Power, adding more than 1,000 megawatts (MW) of utility-scale

The government is focused on securing private investment to construct new hydropower stations, increase thermal generation efficiency and diversify fossil

Georgia's clean energy economy is booming, with more than 78,000 jobs across the state as of 2023, including jobs in renewable electricity generation, energy storage, energy efficiency, and clean vehicles.

The ARO liability includes the cost estimate to dismantle the solar generation site and return the land back to its near original state, as well as the estimated cost to recycle the panels once they are

Explore our power and energy services, from renewable energy to low-carbon solutions. Drive sustainability, reduce emissions and secure reliable energy supply.

Georgia Solar Power Generation and Energy Storage Enterprise

Solar and wind power are intermittent sources of energy, and utility-scale battery storage systems store that energy to balance the grid during peak

Explore GASEIA's efforts in advancing solar energy for economic development and community benefits in Georgia. Join us for policy updates and membership

The State of Georgia is positioned to become a leader in battery energy storage in the Southeast with Georgia Power's planned investment to own and operate 80 megawatts (MW) of

Advances in energy storage technology have the potential to positively affect the energy distribution and transmission systems (smart grid), our energy consumption (electric vehicles), make electricity more

Georgia Power filed an update to its Integrated Resource Plan (IRP) to request additional generation resources in the face of mounting projected energy needs for the state.

RWE's Hickory Park project, which is one of the first DC-coupled large-scale solar-plus-storage projects in the US and from which Georgia Power will buy energy for 30 years. Image: RWE.
