Here, we demonstrate that endothelial cell (EC) senescence plays a negative role in pulmonary hypertension via juxtacrine interaction with smooth muscle cells (SMCs). By using EC

**Introduction** Atherosclerosis is a complex molecular and cellular process triggered by low shear stress and evolving from endothelial cells (ECs) dysfunction to subendothelial accumulation of oxidized low

The media is the middle layer, comprising dense populations of concentrically organized smooth muscle cells (SMCs) with fibers or bands of elastic tissues. Adventitia consists of a

Studies vascular compliance, subsequently causes increased pulmonary vascular from various which imposes a hemodynamic load on abnormal cellular cells (PASMCs) are closely associated with

**Abstract**--In intact vessels, endothelial cells (ECs) and vascular smooth muscle cells (VSMCs) act as an integrated system, possibly through reactive oxygen species (ROS). Using a

**Key Learning Points** Vascular smooth muscle cells (VSMCs) are present in the wall of the artery and regulate the constriction and dilatation of blood vessels.

However, recent discoveries have also uncovered the presence of a range of multipotent and lineage-restricted progenitor cells in the mural layers of postnatal blood vessels, possessing high

The hypothesis proposed in this study that active contraction of vascular smooth muscle cells stimulates endothelial cells to release NO is further supported by findings in the perfused

Co-culture models of endothelial cells, macrophages, and vascular smooth muscle cells for the study of the natural history of atherosclerosis Martin Liu<sup>1</sup>?, Saurabhi Samant<sup>2</sup>?, Charu
